## Siemens Transportation Systems relies on biz<sup>2</sup>Office by inPuncto GmbH

Stuttgart, 23rd of May 2007 - Siemens Transportation Systems solves mobile challenge. The partial concern of Siemens with more than 8.000 employees decided in favour of the solution of the certified SAP and Microsoft partner inPuncto GmbH for an optimized bidirectional synchronization between SAP and Microsoft.

„ With the biz<sup>2</sup>OfficeSynchronizer, the increasing requirements on data conformity and quality can be carried. "

For the comfortable handling of Office documents at the file level, Siemens Transportation Systems applies the SAP standard tool "SAP Easy DM". The solution of inPuncto extends this standard by the bidirectional synchronization between SAP and Microsoft Office documents. With the biz<sup>2</sup>Office the users are now also able to bidirectional synchronize contents of the SAP system with the Office documents. Here, is important:

The forward and backward channel of data fields in Microsoft documents to SAP.

In doing so, SAP functions as "leading" system: The SAP business logic can be comfortably used at the corresponding Microsoft applications (Word, Excel and Powerpoint).

Business-relevant e-mails in MS Outlook are uniquely deposited as MSG file, as text file (e-mail content) and separated attachments with the appropriate classifications/object links in the SAP-DMS.

"With the biz<sup>2</sup>OfficeSynchronizer, the increasing requirements on data conformity and quality can be carried. Furthermore, faults and multiple inputs are avoided here and it contributed to the fact of reducing the amount of data to the essential", Dr. Dieter Trebo, project leader PLMwins at Siemens Transportation Systems explains. "Documents of business relevance can quickly and safely be carried into the project and product data management."

The roll-out happened after an intensive test phase and in due consideration of business specific requirements.
