The inPuncto biz²Scanner for SAP R/3

The SWU Energy GmbH is a power supply company which supplies the German cities Ulm, New-Ulm and neighborhood with power, natural gas, tele-heating and drinking water. Three years ago, SWU decided in favour of the concern-wide introduction of SAP R/3. In addition to the economically oriented functions of the SAP R/3 systems, the module-comprehensive requirements in the area of the document management and document archiving increasingly become the focus of attention.

The company belonging to the Jenoptik Group develops separate products as add-ons for SAP PLM. At end of the year 2001, the SWU Energy GmbH decided in favour of the application of biz²Scanner of the inPuncto GmbH within the SAP module PM/CS for the digital capture of application forms, layouts, correspondence etc. and add-on archiving.

The now available ideal solution offers a problem-free handling for the users

For the introduction of PM/CS it was looked for a simple possibility to allocate scanned documents to a SAP document info record. Through a formerly used self-developed application there already existed scanners at many workplaces, which should be further on used for the capture and add-on archiving.

The SWU Energie GmbH made a find at the company inPuncto GmbH from Stuttgart which positions itself as leading provider of products and services in the SAP-PLM area.

Perfect compatibility with simple document scanners

With the biz²Scanner, documents can be directly scanned in the SAP GUI through any twain-able scanner and filed in the SAP-DMS. In addition to the completely problem-free installation and short lead time, the support of multipage tiff including the possibility to relocate the order of the pages and afterwards add or delete pages, is a special highlight. Without biz²Scanner, one firstly would have to save the file in the file system, then look for the file in the document info record and take it, which often poses a significant problem for fewer experienced PC user. The now available ideal solution offers a problem-free handling for the users.
